BREMNES SEASHORE – DENSITY IN FARMING PENS

The density in Norwegian farming pens is regulated by §25 in the aquaculture operation regulation of 2008. The paragraph states that the fish density in a farming pen shall not exceed 25 kg/m³; equivalent to 2,5% fish and 97,5% water in the pen. Bremnes Seashore strives not only to comply with the regulation, but to exceed it. On average our fish density is 0,7%.

Best regards
Bremnes Seashore AS
