BREMNES SEASHORE – SUSTAINABLE OPERATIONS

Working sustainably is natural for Bremnes Seashores. We strive to produce healthy food on nature's premise with the minimum amount of environmental impact on its surroundings. As such, it is natural for us to have sustainability as a key focus in our strategy. Furthermore, we have adopted several of the U.N.'s sustainable development goals as a framework to ensure that our operations are sustainable.

In addition to this adaptation of the U.N.'s sustainable development goals, we comply with several international recognised aquaculture standards. These standards make it easy to show that we operate safely and sustainably. The three most significant standards are Global G.A.P., B.R.C. and Friend of the Sea. All three have particular focuses on fish welfare, sustainability and health & safety

Best regards
Bremnes Seashore AS
